| RESUMO | | |
| <p>The project aims to analyze crime in a specific area (Historic Center of Porto) in an holistic, multifaceted and multisystemic perspective, through information from official statistics, self-report surveys, and observation of physical spaces, developed by a multidisciplinary team. In this logic, crime will be investigated from the point of view of a triangle whose vertices will be: official crime statistics; crime data by self-report and indicators from school professionals; and spaces in which crime may occur. Generally, it will be necessary to characterize the criminal occurrences, taking into account the type of crime, the geographical/spatial location, and the social actors involved; the access to crime not officially reported; the identification of indicators of crime, or risk for it, in a school context, and in a preventive view; and the identification/mapping the conditions of physical spaces that may be associated with criminal practices.</p> | | |
